

AH - Arbor Hole

Osborn® brushes are made with a variety of standard sizes which can easily be adapted to fit any standard spindle.

OD - Outside Diameter

Standard Osborn® wheel brushes are made with outside diameters from about one inch to almost two feet. Generally, the largest diameter that suits your work space and machine speed will be most efficient.

ID - Inside Diameter

Assuming a fixed O.D., increasing the I.D. produces a stiffer, less flexible brush.

T - Trim Length

Shorter trim makes a stiff, fast cutting brush. Longer trim makes a more flexible brush for irregular surfaces.

F - Face Width

Standard face widths range from extremely narrow to several inches wide. Many styles can be mounted in multiple.

Crimped Wire Wheel Brushes

- Can be mounted horizontally or vertically
- Highly flexible, ideal for light to medium duty surface preparation on irregular surface
- Offered a variety of style from aggressive material removal to surface conditioning and polishing

NARROW FACE

- More flexible than the wide and medium style
- Can be mounted in multiples
- To be used with a straight grinder, a bench/pedestal grinder or a right angle grinder
- **Application:** Deburring and cleaning narrow areas, producing antique finishes, rust and paint removal
