

## Pole Top Rescue | Duration: 8 hours

Maximum Participants: 8 students | Product Code: SHC135

### COURSE TOPICS:

- Review of wood pole climbing equipment and PPE
- Wood pole climbing fundamentals
- Basic rescue principles
- Wood pole rescue systems and equipment
- How to respond appropriately to an emergency
- How to perform various wood pole rescue maneuvers

### COURSE DESCRIPTION:

People working wood poles are often times alone, and in remote areas with limited access to emergency services. Our Pole Top Rescue course helps students to become familiar with the rescue methods needed by wood pole climbers who may have no other option than to perform a rescue themselves.

The entirely practical course is intended for those who have already been trained on the basic fundamentals of working at heights, and who are capable of basic ascent and descent on a wooden pole. It provides students with the opportunity to practice various rescue scenarios in our world-class training park with expert instructors on standby.

**\*Pre-requisite:** Basic Fall Protection Training (PCB)
